### Back and Forth Ball Roll

Young children seem to always gravitate towards things that roll. Rolling a ball back and forth is a way to build a social bond between the parent and child. This type of game is also an introduction to Cause and Effect.

#### Materials:

-Small to medium sized ball.

Sit facing your child and roll the ball to them. Encourage them to roll it back to you. If your child is only able to give the ball a little push, just reach over and get the ball. Roll the ball back to your child again. Remember to narrate everything you do as you play this game.

#### Vocabulary:

-roll, back, again, catch, me, you, ball.
