

Sensory Bottles

Age group: Infants

Materials Needed:

- 1: Clean empty plastic water bottles with removed labels
- 2: Superglue (or a hot glue gun)
- 3: Warm water
- 4: Glitter (optional)
- 5: Food coloring
- 6: Corn syrup or baby oil

Directions:

- First squeeze corn syrup into an empty water bottle. Use enough to fill one-third of the bottle with the syrup. (Instead of corn syrup, you can use baby oil.)
- Add warm water until it's about three-quarters full.
- Next, add a few drops of food coloring and sprinkle in some glitter.
- Put the lid on the water bottle and shake to mix the ingredients.
- Once you're satisfied with how it looks, fill the bottle to the top with water. Put the lid back on and secure it with superglue or hot glue. Allow one day for lids to adhere to bottles.
