DRDP Measure: COG 8: Cause and Effect

Age Group: Toddler

### Ramps

Material Needed: Cardboard or wood plank, toy cars

- Kids love to send cars down ramps!
- Just prop up your cardboard or wood plank to make a ramp and let your children start sending the vehicles down them.
- You can set up several at a time and have races. You can have your child predict which car will win.
- You can even have your child predict how far their car will go. You can take tape and put it at the end to see how far the cars actually go.
- Another idea would be to put different materials on the ramps to cause different forms of friction- to see if the cars go slower or faster. You can use a towel, different kinds of paper, etc.
- Have Fun exploring cause and effect with ramps!
