DRDP Measure: Number Sense of
Quantity
Age Group: Preschool

Counting Coins

In this measure the children can count up to 5 objects and begin to understand that the last number counted is the total number of objects in the group. They can move toward solving simple everyday problems involving numbers by counting up to 10 objects with one to one correspondence; and recite numbers correctly up to 20.

In these photos the children found leprechaun coins. They counted them, sorted them by color and re-counted them again!
