

Child Group Time Session

Paper Plate Drum

Children love to use musical instruments. The experience helps to build their sensory development. As they create and explore ideas with musical instruments, they create more pathways in their brain.

Large and fine motor skills are enhanced as your child hits the drum. Patterns and rhythms are explored as various beats are experienced.

- You can vary the sound of the beat by using paper straws, chopsticks, or pencils.
- You can vary the striking of the sticks with two hands together or alternate strikes.
- Experiment when singing your favorite songs too!
- Most importantly, have fun!
